

KONRAD DOMINIK VINCLER

London, UK | konrad.vincler@gmail.com | konradvincler.com

Full-stack engineer experienced in architecting systems, driving feature delivery, and improving platform performance. Known for ownership, adaptability, and effective collaboration across engineering and product teams.

EDUCATION

BSc (Hons) Computer Science | Queen Mary University of London | 2022 - 2025

- Received a First Class Degree
- Built a foundation, and a wide range of knowledge in Computer science through project-based learning
- **Final Year Project:** Developed a full-stack NFC-based access control application for Android using Kotlin Jetpack Compose and Django, focusing mainly on swift and secure authentication and user experience.

Fazekas Mihaly Secondary Grammar School Budapest | 2018 - 2022

GCSE (UK A level equivalent): 5 A (A*A*AAA)

EXPERIENCE

Full-Stack Software Engineer | Efficura | 2025 – 2026

- **Built a full-stack MVP Property Acquisition application**, delivering dashboards, deal/asset pipelines, fund-management workflows, and an AI-powered asset-intake system that processes introduction emails into structured asset data.
- **Led end-to-end architectural and system design** for the entire product vertical, defining data models, API boundaries, component patterns, and integration points across backend services and frontend workspaces.
- **Facilitated ongoing client communication throughout development**, gathering requirements, validating workflows, demoing iterations, and translating feedback into actionable engineering tasks.
- **Owned the full JIRA lifecycle**, breaking down features into epics/stories, estimating work, maintaining sprint flow, and ensuring cross-team visibility on progress and blockers.
- **Developed an internal email-client library integrating Microsoft Graph (OBO auth)**, enabling multi-folder browsing, persistent drafts, attachment proxying, and reply drafting directly inside the platform.
- **Integrated new components into an existing workspace-style component architecture**, refactoring shared primitives, aligning UX patterns, and ensuring consistency across modules without introducing regressions.
- **Delegated and coordinated tasks across the team**, providing technical direction, reviewing PRs, unblocking teammates, and ensuring alignment with architectural standards.
- **Led a platform-wide performance overhaul**, implementing data and viewport prefetching, parallelised authentication, and backend throughput improvements via parallelised database lookups.
- **Built comprehensive testing infrastructure**, including a tRPC router spot-check harness, backend integration tests, and production-grade end-to-end test coverage using real authentication flows.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, Kotlin, SQL

Frameworks: Django, React, React Native, Vue, Jetpack Compose, Java Swing, T3, Playwright, Drizzle ORM

Platforms: Desktop, Web, Android, IOS

Development: Agile Environments, Jira, CI & CD pipelines

Version Control: Git
